

Railway Division

Russell Ductile Castings was the first foundry to introduce ductile iron into rolling stock manufacture. During this period we have worked consistently with our partners in the railway industry to develop new cast products to meet the ever increasing demands for bogie manufacture.

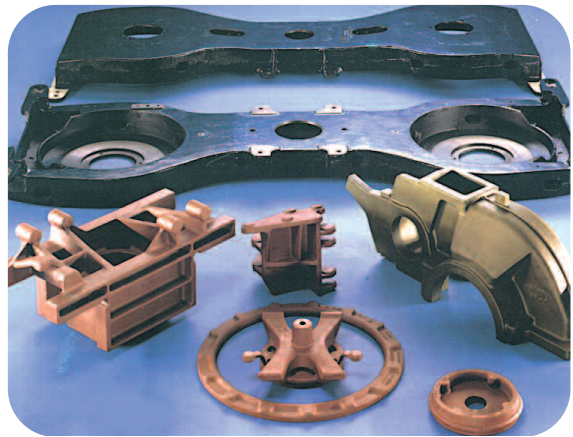

Many years of experience gained through supplying the rail industry with high quality, safety critical components means that we know what our customers want.

We are also fully conversant with the specifications and quality levels required by our customers and have a history of producing a whole portfolio of rolling stock components.

This means that we not only have the necessary manufacturing capability, but also the proven technical expertise that is expected within the rail industry.

The Complete Supply

Most of the components that we supply into the rail industry are supplied in the fully machined condition on a "Just In Time" basis and in kit form.

FOR SAFETY CRITICAL RAIL COMPONENTS, RUSSELL DUCTILE CASTINGS IS THE NAME YOU CAN TRUST.

Certification

Russell Ductile Castings is ISO 9001:2000 accredited to supply components in fully machined and assembled condition.
