

Water & Flow Control

Ductile Castings has gained expertise in the production of castings for a wide range of water & fluid flow control and filtration products. These high quality units feature bi directional closing and zero leakage capability. Pressures used within these systems range from ANSI 100 through to 2200 lbs, with an aperture size of between 12" and 50". The products are designed to be used in harsh environments.

Castings of up to 3000 kilos are produced and cover a variety of uses within this market sector, including sea water cooling systems, high volume water transfer and filtration and fire mains. Castings are produced to tight tolerances, supplied direct to our customers either 'as cast' or we can deliver fully machined components direct to build lines. Actuation can be via manual gearbox, pneumatic, electric or hydraulic control, while flanges to suit any American or European standard are available.

Certification & Accreditations

I.S.O. 9001-2000

General Electric Approved Supplier.

Rolls Royce Approved Supplier.

Siemens Approved Supplier
